## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.  
PCT/US02/31587**V. Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement****1. STATEMENT**

Novelty (N)	Claims <u>NONE</u>	YES
	Claims <u>1-6</u>	NO
Inventive Step (IS)	Claims <u>NONE</u>	YES
	Claims <u>1-6</u>	NO
Industrial Applicability (IA)	Claims <u>1-6</u>	YES
	Claims <u>NONE</u>	NO

**2. CITATIONS AND EXPLANATIONS**

Claims 1-6 lack novelty under PCT Article 33(2) as being anticipated by Brown et al. Brown et al. teaches the claimed logic analyzer in claims 1-3 comprising a control circuit adapted to read in test data from a test sample, a memory controlled by said control circuit to store the test data received from said test sample and display means adapted to display the test data fetched by said control circuit from said memory, enabling said control circuit to drive a compressor to compress the test data received from said test sample before storing the test data in said memory.

Brown et al. also teaches the claimed logic analyzer disclosed in claims 4-6 comprising a control circuit adapted to read in test data from a test sample, a memory controlled by said control circuit to store the test data received from said test sample and display means adapted to display the test data fetched by said control circuit from said memory, enabling said control circuit to drive a compressor to compress the test data received from said test sample before storing the test data in said memory and to depress the compressed test data before transmitting from said memory to said display means.

Claims 1-6 meet the criteria set out in PCT Article 33(4), because the invention has broad application to any type of circuit for use in all types of computing systems that need to be tested and test results needed to be analyzed.
